or call 888-PRO-FNDS.

Many ProFunds routinely employ leveraged investment techniques that magnify gains and losses and result in greater volatility in value. Each leveraged or inverse ProFund seeks a return that is a multiple (e.g., 2x, -1x) of the return of an index or other benchmark (target) **for a single day, as measured from one NAV calculation to the next**. Due to the compounding of daily returns, leveraged and inverse ProFunds' returns over periods other than one day will likely differ in amount and possibly direction from the target return for the same period. These effects may be more pronounced in funds with larger or inverse multiples and in funds with volatile benchmarks. Investors should monitor holdings consistent with their strategies, as frequently as daily. For more on correlation, leverage and other risks, please read the prospectus.

Investing involves risk, including the possible loss of principal. ProFunds mutual funds are generally non-diversified and each entails certain risks, which may include risk associated with the use of derivatives (swap agreements, futures contracts and similar instruments), imperfect benchmark correlation, leverage and market price variance, all of which can increase volatility and decrease performance. **There is no guarantee any ProFunds mutual fund will achieve its investment objective. ProFunds are not suitable for all investors because of the sophisticated techniques the funds employ.**

Carefully consider the investment objectives, risks, charges and expenses of ProFunds before investing. This and other information can be found in their summary and full prospectuses. Read them carefully before investing. Obtain them from your financial advisor or by visiting ProFunds.com. ProFunds are distributed by ProFunds Distributors, Inc.
